

Historically Useful Then and Now

The louvered slats of the shutters are adjustable to allow for air circulation while blocking solar gain on hot days.

A

Used in combination with open lower sash on the ground floor, opening the sash in double-hung windows on upper floors creates air flow to cool off rooms in warm weather without using AC.

B

Deciduous tree will grow to provide shade from sun in the summer when leafed out and will let in warming winter sun.

C

Operable shutters open and close to regulate the amount of solar heat gain or loss and reduce drafts in the winter.

D
